SUMMARY

Software Engineer QA Engineer with hands-on experience building full-stack web applications and engineering end-to-end automated testing solutions. Proficient in developing production-ready systems using the MERN stack while ensuring software quality through Selenium, Appium, Cypress, and Postman test frameworks. Skilled in RESTful API development, database management, JWT security, and CI/CD pipeline integration via GitHub Actions. Combines clean coding practices with comprehensive STLC methodologies within Agile/Scrum environments to build, test, deliver applications.

EDUCATION

Bachelor of Software Engineering (BSSE)

2022 – 2026

FAST National University of computer and Emerging Sciences, Pakistan

PUBLICATIONS

Quran ILM: An Empirical Study of LLM and RAG Architectures for Quranic Question Answering

Published, IEEE Xplore (<https://ieeexplore.ieee.org/document/11577717>)

WORK EXPERIENCES

QA Intern – Paklogics

June 2026 – Present

- Executed manual UI, functional, and cross-browser testing on Oritto (O/A Level learning platform).
- Executed cross-browser (Chrome, Edge, Safari) and cross-device testing using Chrome DevTools, validating navigation, form interactions, session persistence, and error handling to ensure accurate app behavior.

Web Developer Intern – Developers Hub

Nov 2025 – Jan 2026

- Developed and deployed full-stack features for web applications using React, Node.js, and MongoDB, contributing to production-ready code that improved user experience.
- Built REST APIs with Express.js, created React components for user interfaces, and designed MongoDB database schemas for efficient data management.

QA Intern – UWORX

June 2025 – Aug 2025

- Built modular automation testing frameworks utilizing object-oriented design patterns (POM) to ensure code quality and system maintainability.
- Engineered backend validation suites to verify RESTful API endpoints, request/response payload structures, and HTTP status codes across application services.

PROJECTS

Quran ILM RAG Assistant — Python, Streamlit, MongoDB, Gemini API, Pytest

- Developed a scholar RAG chatbot and engineered an automated LLM-as-a-Judge semantic evaluation suite to validate grounding, relevance, guardrails, and tone with zero-cost fallback mocking.

SkillsSwap — React, Node.js, MongoDB, JWT, Express

- Built a real-time freelance marketplace with Socket.io-powered bidding and chat, featuring secure JWT authentication, role-based dashboards, and admin verification workflows.

EduConnect E-Learning Platform — React, Node.js, MongoDB, Docker, Kubernetes

- Built a role-based tutoring platform enabling scheduling and session booking between students and tutors, containerized with Docker and deployed on Kubernetes with autoscaling (HPA), with Recharts-based analytics for traffic and growth.

Mobile Test Automation Framework — Appium, Java, TestNG, GitHub Actions

- Built a Java-based Android UI testing framework using Appium and Selenium (POM), integrated with GitHub Actions for automated headless testing on Pull Requests.

Oritto E-Learning Platform — Manual QA, UI/Functional, Cross Browser Testing

- Designed and executed a manual UI, functional, cross-browser test suite for an O/A Level e-learning platform, validating navigation, session workflows, and exam modules using Chrome DevTools device emulation.
